## **Squaring the circle Wikipedia**

Squaring the circle is a problem proposed by ancient geometers It is the challenge of constructing a square with the same area as a given circle by using only a finite number of steps with compass and straightedge It may be taken to ask whether specified axioms of Euclidean geometry concerning the existence of lines and circles entail the existence of such a square

## **Square triangular number Wikipedia**

Explicit formulas Write  $N_k$  for the  $k$ th square triangular number and write  $s_k$  and  $t_k$  for the sides of the corresponding square and triangle so that Define the triangular root of a triangular number  $N = n(n+1)/2$  to be  $n$  From this definition and the quadratic formula Therefore  $N$  is triangular  $n$  is an integer if and only if  $8N+1$  is square Consequently a
