## **Diamond Wikipedia**

Diamond is a solid form of the element carbon with its atoms arranged in a crystal structure called diamond cubic. At room temperature and pressure another solid form of carbon known as graphite is the chemically stable form but diamond almost never converts to it. Diamond has the highest hardness and thermal conductivity of any natural material. Properties that are utilized in major

## **Vector space Wikipedia**

A vector space, also called a linear space, is a collection of objects called vectors which may be added together and multiplied (scaled) by numbers called scalars. Scalars are often taken to be real numbers, but there are also vector spaces with scalar multiplication by complex numbers, rational numbers, or generally any field. The operations of vector addition and scalar multiplication
